

SimMedical

has an established track record of serving regional, national and international clients for the express purpose of developing, testing, implementing and operating comprehensive healthcare simulation-based training centers and programs.

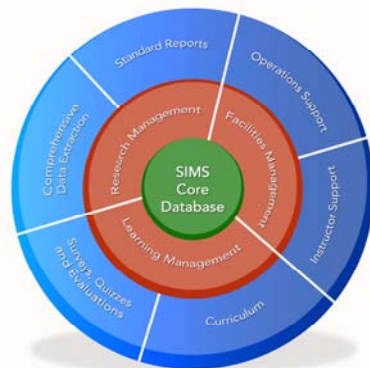

Consulting Services

SimMedical experts provide all essential consultancy services to effectively and efficiently assess, design, implement and operate your organization's world-class simulation center and program.

Simulation Information Management System (SIMS)

A web-based system offering framework to facilitate operations of a simulation-based training center by addressing key components of facility management, curricula delivery, data collection and reporting.

Medical Device Testing

Manufacturers partner with SimMedical to conduct regulatory, usability and quality testing using simulation-based methods to reduce product time to market.

Curriculum

SimMedical supplies comprehensive simulation-based training curricula developed by leading clinical experts to address today's most pressing healthcare provider training and patient safety concerns.

Training Services

SimMedical's knowledgeable team provides a multitude of training services including professional instructor courses and curriculum product training.
